

New Process water supply Albemarle

The old process water installations of Albemarle are replaced by new state of the art installations, supplied by Evides and Logisticon. Evides is very experienced in operating water utility systems. And Logisticon has proved itself again and again a reliable partner. With a lead time of about 9 months there is a very complex installation constructed in a very limiting space, the existing building. A real showpiece!

The result: , 3 trains of Multi Media Filtration, UF and O (with seawater membranes because of the high salinity in the Noordzeekanaal) of each 80 m³/h. The installation is equipped with a fully automatic CIP cleaning system, and includes dosing of about 7 different chemicals. Even a steam heating is provided to ensure proper operating during the winter.
